

ITHACA® ULTRA Seating

Ithaca Ultra High-Back Task Chair

Modern styling meets old-world executive comfort with the Ithaca Ultra High-Back Task Chair. Its soft mesh headrest and back contribute more than just a distinctive aesthetic, they improve air circulation for greater thermal comfort. Paired with this cutting-edge material is a classic upholstered foam seat with waterfall edge to provide a soft sit.

Though it uses a mix of materials, Ithaca Ultra is single-minded in its focus on the user. A host of arm options from fixed to fully-adjustable

make it easy to find the look and function that best suits any managerial environment.

From headrest to base, this high-back task chair also adjusts to meet your needs. In addition to the seat height and depth controls beneath the seat, there is also a tension tilt knob that controls the amount of force necessary to recline as well as a synchronized mechanism with a lock lever that locks the seat-to-back angle in several positions.

JR69 arms feature a pivoting arm cap that moves front-to-back as well as side-to-side. Arm is height and width adjustable as well.

For the classic task chair look and feel, fixed loop arms of urethane can be specified.

Vertically and horizontally adjustable T-arms provide comfortable, ergonomic support without intruding into your seating area.

Fully adjustable T-arms (KR200M) have a generously sized arm pad for added comfort.

ITHACA® ULTRA Seating

Ithaca Ultra Mid-Back Task, Guest & Stool

Because even an accommodating design doesn't suit every application, the Ithaca Ultra is available in multiple configurations. The mid-back task chair has the same complement of adjustments and arm options as the high-back, but its additional back height adjustability ensures ideal lumbar support.

The Ithaca Ultra stool also features seat height adjustability and a reclining mechanism with a back tilt lock. An oversized 5-star base and adjustable steel foot ring provide increased

stability and security over the its 22¼" to 30" height range.

The Ithaca Ultra guest chair may rely upon its sturdy sled base and subtle curves to attract attention, but that doesn't mean it is short on thoughtful features. The mesh back is height-adjustable, and the non-marring poly glides provide stability on a variety of floor surfaces. Even at its most basic, Ithaca Ultra is the smart choice in innovative design.

An integral ratchet mechanism allows the back height of the task chair to be adjusted from a seated position.

Changes in seat depth are made possible by a lever conveniently located beneath the seat.

Lock the back and seat in any of several angles by pushing up the locking lever on the back left. To free-float, just push the lever down.

A tilt tension knob means that every user can adjust the chair to respond to their reclining cues.
