GENERAL INFORMATION

Overview

Legion is the unifying element that brings together architecture and furniture to create highly effective work environments that are both engaging and productive. As a comprehensive Systems offering, Legion features preconfigured panels, worksurfaces and storage elements, which together allow for dynamic solutions to current and future needs. Yet, Legion also brings a degree of simplicity to Systems furniture that other systems lack. Uncomplicated, but by no means boring, Legion simplifies the entire Systems furniture process—from planning and specifying, to ordering and installing—so more time is spent appreciating the end result and less time is spent worrying about the details.

Panels

Preconfigured monolithic and segmented Legion panels are available. Panels may be specified without top caps to allow for attachment of spanning top caps or divider screens. All Legion panels meet the flame spread and smoke generation criteria defined in the UL 1286 safety standard for office furnishings.

Preconfigured panels are 3.5" thick and are available in the following dimensions:

- Widths: 24", 30", 36", 42", 48", 54", 60", 72" (split tile on 72")
- Heights: 32", 40", 48", 56", 64"

Three base styles allow for functional and aesthetic planning flexibility:

- Standard base
- Elevated base
- Tile-to-floor base

Insert tiles are interchangeable among standard, elevated, and the standard base side of tile-to-floor panels. The tile height of the tile-to-floor tile is unique and not interchangeable. All tiles are hand-placed, requiring no tools for attachment to Legion frames. Standard and elevated base styles support future reconfiguration that substitutes either base style for the other.

Standard bases allow for distribution of power and data at the base of the panel. Elevated bases improve air circulation and lighten overall scale of the panel. Tile-to-floor panels feature a base raceway on the user side and no base raceway on the opposite side. Above worksurface beltline power is available regardless of preferred base style.

Preconfigured monolithic panels feature fabric inserts. Fabric wraps around the board on all sides to minimize end fraying.

Preconfigured segmented panels are available in a variety of substrate and finish options. Segmented panels universally feature a 32" segmentation height, with specified upper and lower, and front and back tiles. Preconfigured substrates vary by

configuration and may include:

- Fabric—upper and lower
- Single pane glass—upper
- Steel laminated markerboard—upper
- Open tile—lower

Preconfigured stacking sections add 16" to any Legion panel, and are retrofittable to existing installations. All parts and hardware are included. Preconfigured models are available with inserts of the following tiles:

- Fabric
- Powdercoated solid steel
- Powdercoated perforated steel
- Single pane glass
- Steel laminated markerboard

Connectors and Trim

All Legion panels include necessary panel connector blocks and light blocks. Connectors are universal and allow panel-to-panel connections of same or varied heights, as well as all panel-to-post and top cap connections.

Legion panels also include trim wherever possible. Trim included with panels consists of top cap, bottom trim channel or tile-to-floor trim, base raceway cover and foot shroud. Side/end trim and spanning top caps, along with their respective hardware, are specified separately. All Legion trim is powdercoated metal.

Electrical

Legion's 622 and 442 electrical planning is simple and easy to specify. All Legion panels of 30" and greater widths feature two knockouts per side which accept duplex receptacles (24" panels feature a single knockout) for base or beltway power distribution. Elevated bases may be specified with power distribution at beltway height only. Tile-to-floor tiles do not feature cutouts, but may run pass-through cabling. Specifiable grommet locations ensure convenient access to power sources. All electrical components are specified separately and field installed.

Worksurfaces

Legion offers a variety of worksurface shapes designed to complement flexible workstation planning. All are available in a wide range of sizes. Edges and grommet locations may be specified. General worksurface styles include:

- Rectangle
- Corner

- Extended corner
- Extended corner reduction
- Conference end
- Tapered
- Peninsula
- Credenza and underhead tops
- 120 degree

Worksurface Support

Legion showcases a dynamic approach to planning through the use of multiple support options in a given workstation. All supports feature powdercoated steel. Powdercoated perforated steel inserts add design flair and added privacy.

Worksurface supporting legs are offered in two styles:

- Panel Supporting includes both open and insert styles. The frame ties the worksurface to an adjacent panel in place of a traditional return panel.
- Non-Panel Supporting legs are not tied to a panel, but offer a consistent aesthetic with the panel supporting frames.

Post legs may be used in place of frames for less foot restriction, or may be used in conjunction with panels or frames to support peninsula worksurfaces.

Cantilever brackets are also offered for more traditional planning. Standard and upscale versions are both offered.

HOW TO ORDER

Indicate the following information on order form:

- Quantity of each item.
- Model number, including options.
See "How To Build a Model Number."
- Any special service required.

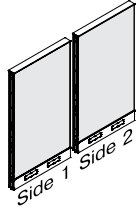

- Note:
- The indicates that a choice is required.
 - The absence of the indicates that no choice is required.
 - Alpha-numeric characters in place of indicate that no other alternatives are available.

HOW TO BUILD A MODEL NUMBER

- A** Select basic model.
- B** Select top cap style.
F - Flat trim (std)
N - No top cap
- C** Select electrical code.
DN - Domestic - no cutouts
DP - Domestic - with cutouts
- D** Select trim color.
Refer to the **Product Color Options** page in this price list.

Legion® Rolling Door

General Information

Plan View of Rolling Door Applications

No Jamb Condition (URDNJ)

180° Inline Condition (URD180)

90° Intersection Condition (URD90)

GENERAL INFORMATION

Legion Rolling Doors allow for simple privacy in workstation, and are offered with or without a jamb closure. Doors without a closing jamb simply overlap the external corner of the closing panel intersection condition. Doors with jamps are shipped with a jamb post and a jamb rail (a receiver where the door can nest there by providing additional privacy).

Sizes

Rolling Doors are offered in the following sizes:
36" w X 64" h (monolithic door core)
36" w X 80" h (segmented door core)
42" w X 64" h (monolithic door core)
42" w X 80" h (segmented door core)

The width dimension provided indicates the nominal opening width that the door will span, and the actual door is oversized to allow for panel overlap. 64" high doors are constructed with a single aluminum frame. 80" high doors have a 16" high segmented top section to correspond to a 16" high Legion stacking section.

Panel Attachment

The panel to which a Rolling Door is attached must be specified at least 6" wider than the Rolling Door model (i.e. 36" w model with 42" w attaching panel), which allows full extension of the door without interference into another panel or an adjacent walkway. This rule is not required if the attaching panel is a member of a panel run.

Door Height Options

80" high Rolling Doors feature a 16" segmented top frame. The top segment of the door is consistent with a 16" panel stacking section on the Legion panel. 64" Rolling Door models are monolithic and do not feature any segmentation.

Cores

Rolling doors are available with two optional core inserts that are designated as "clear" and "opal". The insert material is a horizontally fluted polycarbonate sheet. Both cores are semi-transparent and provide basic privacy while allowing light to penetrate into

the office space. The opal core is less transparent than the clear.

Handedness of Models

All Rolling Door models are "non-handed". Wheel assemblies are packaged separately from the door for unilateral application. Jamb post assemblies are reversible for right or left side assembly.

Planning Options

Rolling doors can be ordered after a job site has been installed (reconfiguration) or space planned in advance of job site installation. If planned in advance, standard Legion intersections will be replaced with jamb post intersections. If a job site is reconfigured after installation, standard intersections must be removed and replaced with the appropriate jamb post assembly. The exception is with the "no-jamb" condition which does not require a closing jamb intersection.
